Spheres & Skyboxes

Problem

**Rendering Infinite Landscapes
is Very Expensive**

Examples

Halo

(<https://jessebartel.substack.com/p/the-beauty-of-skyboxes-feeling-small>)

Examples

Skyrim

(<https://jessebartel.substack.com/p/the-beauty-of-skyboxes-feeling-small>)

Solution

Skybox

Skybox

- Pros:
 - Very Efficient
 - Easy to make
- Cons
 - Edges might be visible
 - Usually implemented at an infinite distance from the camera
 - Far Away
 - Not Parallax
 - Doesn't collide with geometry

Case Studies: Skybox

Skybox: Eterspire (Beta II)

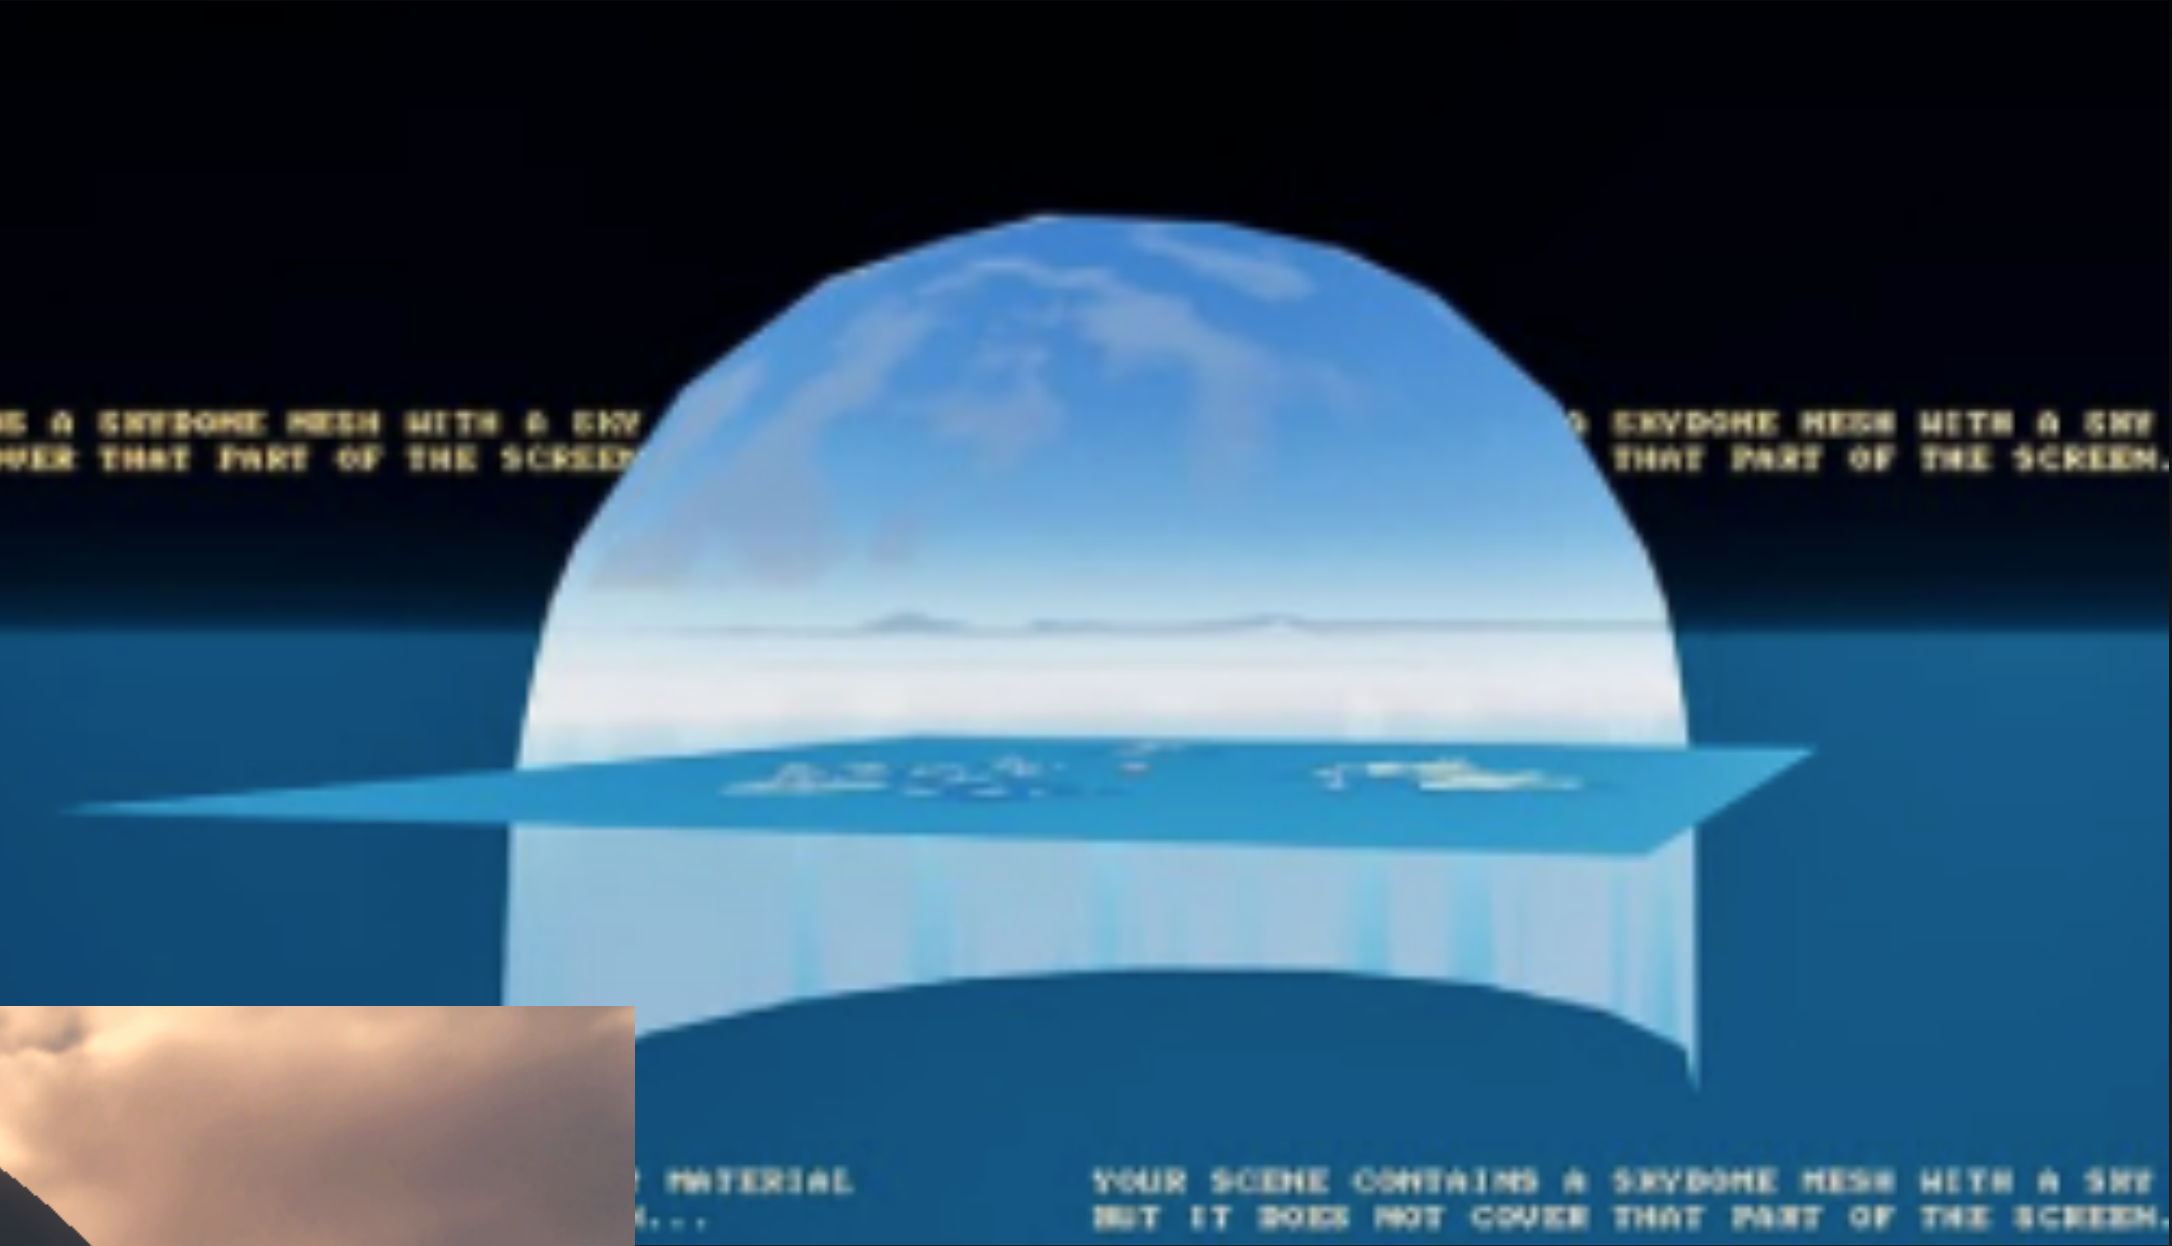

Skybox: Eterspire (Beta II)

Skybox: Eterspire (Beta II)

Skydome

Skydome

Skydomes

- Pros:
 - Real Geometry
 - Separable Parts
 - Parallax
- Cons:
 - More Expensive
 - Harder to make
 - Terrains tend to be square

Case Studies: Skydome

Skydome: Eterspire (Journey Anew!)

Skybox vs Skydome Results

Skybox vs Skydome Results

LODs

Problem

**Rendering Scenery is
Expensive**

Examples

Guild Wars 2

Examples

Skyrim

Examples

(This was a video)

LODs

- Pros:
 - Improved performance
- Cons:
 - Lots of work (can be automated by engine or modeling software)
 - Adds to game size
 - Visual Pop-Ins

LODs

LoD 0

LoD 1

LoD 2

LODs

Culling

Problem

**Rendering Occluded
Geometry is Wasteful**

Frustum Culling

- Technique used to optimize rendering by excluding objects outside the camera's view frustum (FoV).

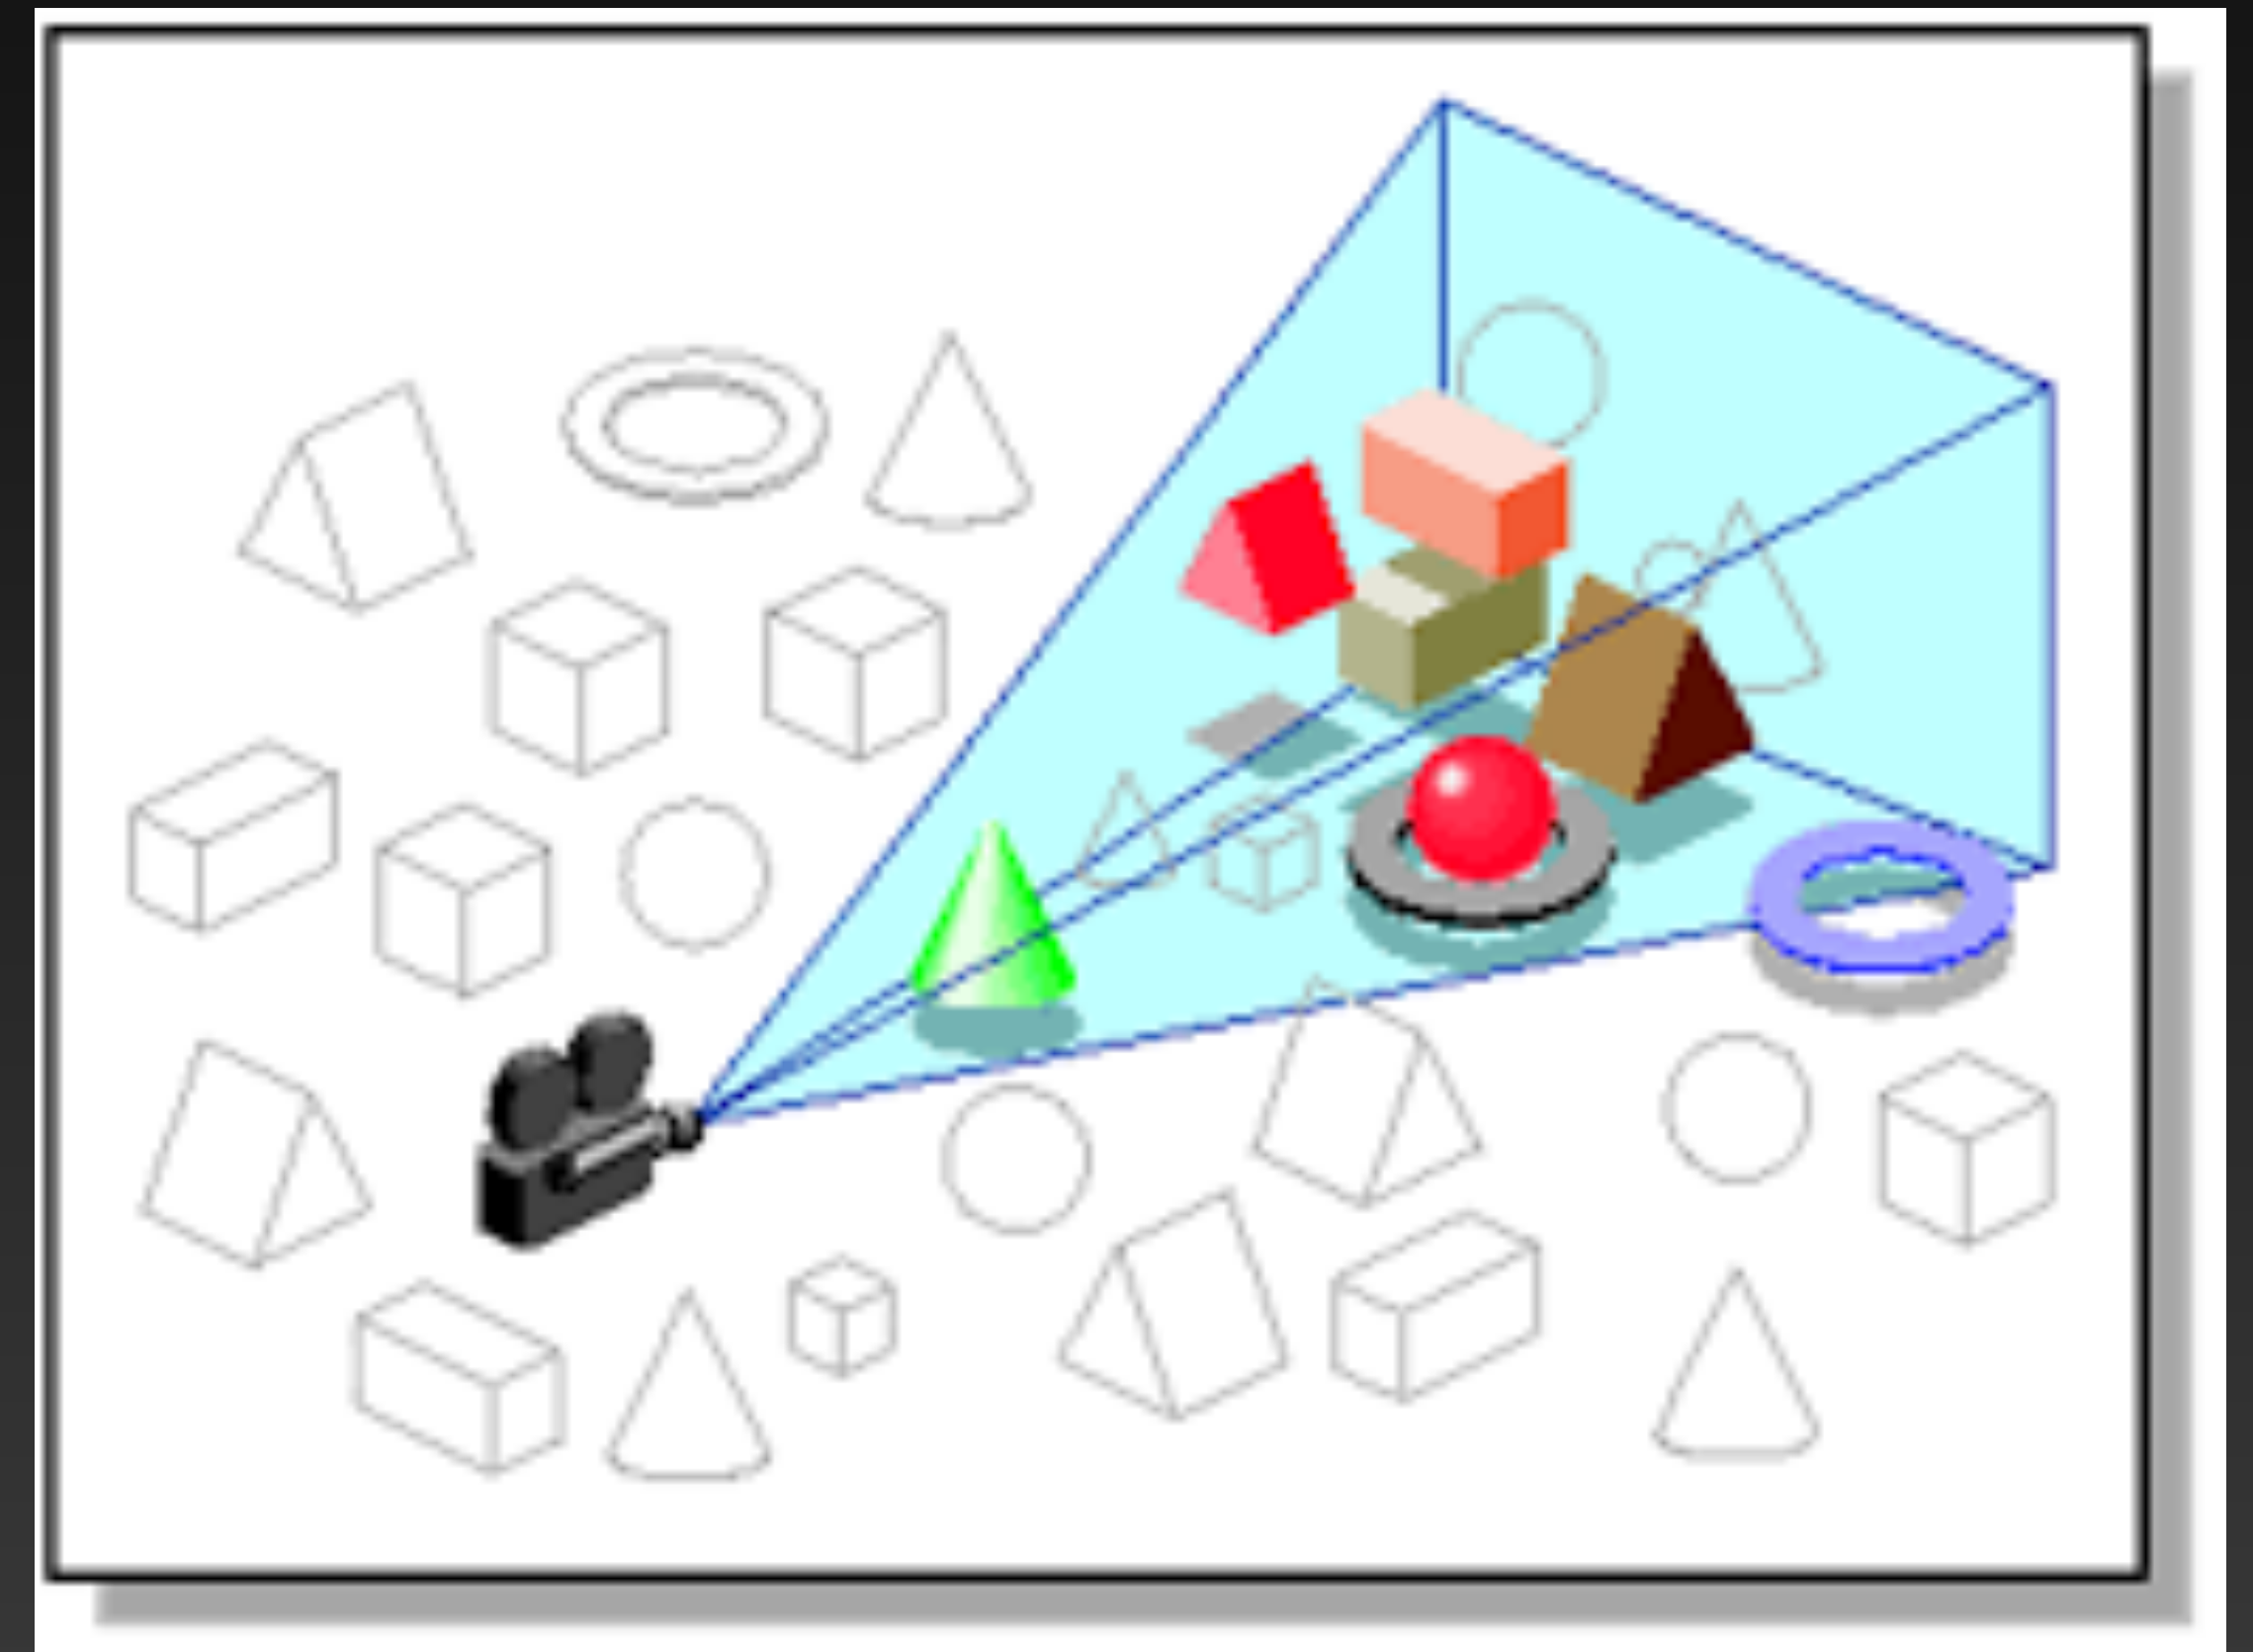

Frustum Culling

- Pros:
 - Reduces Draw Calls
 - Improves Performance
 - Generally Built-In
- Cons:
 - Doesn't occlude
 - This might be very expensive on noisy scenes!
 - May render objects almost completely outside frustum

Frustum Culling

- May render objects almost completely outside frustum

Frustum Culling

Occlusion Culling

- Technique used to optimize rendering by excluding objects not visible to the camera because they are blocked by other objects.

Occlusion Culling

- Pros:
 - Reduces Draw Calls
 - Improves Performance
 - Real-time Optimization
- Cons:
 - Complex to set up
 - Requires maintenance
 - May introduce computational costs
 - Occluders must generally be static geometry

Occlusion Baking

- *Unity divides the Scene into cells and generates data that describes the geometry within cells, and the visibility between adjacent cells.*

Occlusion Baking

Raycasting

- Doesn't need occlusion and is generally frustum culled by default.

Open Scenes

Light Baking

Light Baking

- Pros:
 - Realistic Lighting
 - Lower Memory Usage
 - Better Performance
- Cons:
 - Only works on static geometry
 - Costly to set-up
 - Time consuming & high maintenance
 - Textures often very big
 - Artifacts & seams

Dynamic Light

Light Baking

Case Studies: Baked Light

Baked Light

Toram Online

Light Probing

Light Probing

Light Probing

- Pros:
 - Works on dynamic objects
 - Low Overhead
 - Works great on mobile
- Cons:
 - Costly to set-up
 - Time consuming & high maintenance
 - Artifacts
